Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-13, 19 and 20, drawn to a semiconductor device, classified in class 257, subclass 215.
 - II. Claims 14-18, drawn to a method of manufacturing a semiconductor device, classified in class 438, subclass 149.
2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process that do not include the steps of forming a first and second crystalline semiconductor films on an insulating surface; forming an insulating film on the first and second crystalline semiconductor films; forming a conductive film on the insulating film; patterning the conductive film to form a gate electrode adjacent to the first semiconductor film and form first and second gate signal lines adjacent to the second semiconductor film; forming an interlayer insulating film covering the gate electrode and the first and second gate signal lines; forming a contact hole in the interlayer insulating film; and forming a metal wiring line that is electrically connected to the first gate signal line with the second gate signal line in the seventh step.

Art Unit: 2823

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
